

Here are some things true about this document:

1. there are 1.3 inch margins all the way around;
2. this was created to help you practice typing lists; and
3. there is .4 inches of space after this `enumerate` environment.

Do you like bullet points? I don't.

- They can get **very** repetitive. (You'll need to recall what package enables highlighting to get this line right.)
- ★ Even when I change the bullet symbol it doesn't feel special.
- There is .5 inches of space after this `itemize` environment.

I'm making this last list with the `outline` environment. (This requires the `outlines` package to be loaded in the preamble.) Why use this environment?

- Because nesting
 - is so darn easy
- with this particular
 - environment.
 - * Other ways to do nesting are much more cumbersome.
