

Hello world! This is my first L<sup>A</sup>T<sub>E</sub>X document. My name is [yourname] and my student id is [yourstudentid].

This is a new paragraph. Notice that L<sup>A</sup>T<sub>E</sub>X automatically indent a new paragraph.

This paragraph is not indented and has one-line space from above. How did I do it?

In March 2006, Congress raised that ceiling an additional \$0.79 trillion to \$8.97 trillion, which is approximately 68% of GDP. As of October 4, 2008, the “Emergency Economic Stabilization Act of 2008” raised the current debt ceiling to \$11.3 trillion.

My favorite characters are # & \$.

You’ll notice that this paragraph is *not* justified in the usual manner.<sup>1</sup> I just wanted something different.

Note the justification of **this paragraph** too. This time I just want to be in the middle.

The following word is Huge but the following word is scriptsize.  
What comes next is

2cm below.

Use the hfill command to push

this to the right.

This paragraph has 5cm width and is put inside a box.
