Hello world! This is my first LaTeX document. My name is [yourname] and my student id is [yourstudentid].

This is a new paragraph. Notice that LaTeX automatically indent a new paragraph.

This paragraph is not indented and has one-line space from above. How did I do it?

In March 2006, Congress raised that ceiling an additional $0.79 trillion to $8.97 trillion, which is approximately 68% of GDP. As of October 4, 2008, the "Emergency Economic Stabilization Act of 2008" raised the current debt ceiling to $11.3 trillion.

My favorite characters are # & $.

You'll notice that <u>this paragraph</u> is *not* justified in the usual manner.[1] I just wanted something different.

Note the justification of **this paragraph** too. This time I just want to be in the middle.

The following word is ${\Huge \text{Huge}}$ but the following word is ${\scriptsize \text{scriptsize.}}$ What comes next is

2cm below.

Use the hfill command to push                              this to the right

| This paragraph has 5cm width and is put inside a box. |
|---|

---

[1]The default justification for LaTeX is full justification
